About this release

Data from the monthly Labour Force Survey are released in two stages:

1. [Labour Force, Australia \(/statistics/labour/employment-and-unemployment/labour-force-australia/latest-release\)](#) - which contains headline estimates of employment, unemployment, underemployment, participation and hours worked
2. Labour Force, Australia, Detailed - which contains detailed data not included in the first release

This second release of Labour Force Survey data includes the latest detailed monthly and quarterly data. Some information, including industry, occupation, job duration, and retrenchment, is only available for February, May, August and November.

As a result, in the 'non-quarter' months, the quarterly spreadsheets and datacubes have a different reference period. For example, the May issue contains May monthly and May quarterly data, while the July issue will contain July monthly and May quarterly data.

For more information on the data contained in the first and second releases, see the [Survey output \(/methodologies/](#)

Using regional labour force estimates

The ABS releases two sets of regional Labour Force Survey estimates – the direct survey estimate from the Labour Force Survey and new, higher quality modelled estimates.

The ABS recommends using the modelled estimates over the direct survey estimates whenever possible in reporting on employment and unemployment rates for regional labour markets.

The modelled estimates are also the best source of data for analysis at the Greater Capital City Statistical Areas level. While estimates for capital cities and the balance of states have not been directly modelled, the aggregated modelled SA4 data are better than the direct survey estimates, particularly for the balance of states which generally have smaller populations and smaller sample sizes.

Advantages of the modelled estimates

The Labour Force Survey is designed for national and state and territory estimates with regional data produced as a secondary product. High levels of variability and extreme fluctuations are observable in the direct estimates. This can partly be because of real-world events, like floods, but are often due to the nature of sampling areas with smaller populations. As a result, the direct estimates are of lower statistical quality than the modelled estimates at the SA4 level, especially for sparsely populated rural and regional areas.

The Rao-Yu time-series model used to produce the modelled estimates provides less variable and more reliable levels of unemployment and employment as it draws on the strength of other administrative data and the strong relationship between that data and the labour force survey estimates. This administrative data includes de-identified Single-Touch Payroll data from the Australian Taxation Office for modelling employment and de-identified Youth allowance and JobSeeker recipients data from the Department of Social Services for modelling unemployment.

Further information on these regional estimates as well as other regional labour statistics the ABS publishes, is available in the [Regional labour market data guide \(/statistics/understanding-statistics/guide-labour-statistics/regional-labour-market-data-guide\)](https://statistics/understanding-statistics/guide-labour-statistics/regional-labour-market-data-guide). For information on the development of these estimates, see [Improving SA4 level estimates from the Labour Force Survey using administrative data models \(/statistics/detailed-methodology-information/information-papers/improving-sa4-level-estimates-labour-force-survey-using-administrative-data-models\)](https://statistics/detailed-methodology-information/information-papers/improving-sa4-level-estimates-labour-force-survey-using-administrative-data-models) and [Further refinements to modelled SA4 level Labour Force estimates using administrative data \(/statistics/detailed-methodology-information/information-papers/further-refinements-modelled-sa4-level-labour-force-estimates-using-administrative-data\)](https://statistics/detailed-methodology-information/information-papers/further-refinements-modelled-sa4-level-labour-force-estimates-using-administrative-data).

When to use the direct survey estimates

When using the direct survey estimates (e.g. for periods for which modelled estimates are not available), previous advice on using (moving) annual averages applies. Annual averages are important for understanding the current state of the labour market, and providing medium and long-term signals, as they can lessen the impact of the month-to-month variability associated with small sample sizes.

However, unusual, sudden and/or extreme changes in the labour market (e.g. changes to regular and seasonal patterns in employment, working hours, job search or availability as a result of COVID-19) can be difficult to account for in the short-term using a 12-month moving average. This should be considered before drawing any conclusions from these estimates.

In contrast, annual averages are not required when using the modelled data.

How the modelled estimates compare to state and territory estimates

The modelled SA4 estimates are designed to be additive to the employment, unemployment and not in the labour

force totals for each state and territory (and Australia) published in [Labour Force, Australia \(/statistics/labour/employment-and-unemployment/labour-force-australia/latest-release#states-and-territories\)](#). In the first release (of March 2024 estimates) there were some small differences between the sum of SA4s and the state/territory totals for people not in the labour force, in some months prior to July 2022. With the release of April estimates, the sum of the SA4 estimates are now equal to the published state and territory (and Australia) totals.

Labour Force Survey TableBuilder product update

The ABS has released updated Labour Force Survey data into [TableBuilder \(/statistics/microdata-tablebuilder/available-microdata-tablebuilder/labour-force-survey\)](#). Data from August 2006 to August 2025 is now available.

New TableBuilder users need to [register \(/statistics/microdata-tablebuilder/tablebuilder\)](#) to gain access.

Existing TableBuilder users can request access to the dataset by contacting microdata.access@abs.gov.au (<mailto:microdata.access@abs.gov.au>).

[Subject=I%20want%20to%20register%20my%20organisation%20for%20Census%20TableBuilder%20Pro&Body=Dear%20ABS%0D%0A%0D%0APlease%20register%20my%20organisation%20for%20Census%20TableBuilder%20Pro:%0D%0A%0D%0AOrganisation%20Name:%20%0D%0AABN%20\(if%20Applicable\):%20%0D%0AStreet%20and%20postal%20addresses:%20%0D%0AContact%20Officer%20User%20IDs:%20%0D%0AOrganisation%20email%20domains:\).](#)

Further information about this product, as well as other Labour Force Survey outputs, can be found in the [Labour Force Survey products and data item guide \(/statistics/understanding-statistics/guide-labour-statistics/labour-force-survey-products-and-data-item-guide\)](#).

Labour force status

Last month the ABS introduced improvements to its estimation methods for labour force status by country of birth, published in pivot tables LM4 and LM5.

In addition, pivot table LM7 was removed as it used classifications [no longer used by the ABS \(/statistics/standards/standards-statistics-cultural-and-language-diversity/latest-release\)](#).

Further information on the changes to migrant labour force data is available in the [Enhancing Estimates for Migrants in the Labour Force Survey \(/articles/enhancing-estimates-migrants-labour-force-survey\)](#) article.

Industry and Occupation

The [Labour Account \(/statistics/labour/labour-accounts/labour-account-australia/latest-release\)](/statistics/labour/labour-accounts/labour-account-australia/latest-release) is the best source of quarterly industry and sector data. For information on how it provides a better allocation of employed people and their hours based on the characteristics of their employing business, see [Industry employment guide \(/statistics/understanding-statistics/guide-labour-statistics/industry-employment-guide\)](/statistics/understanding-statistics/guide-labour-statistics/industry-employment-guide).

The ABS is currently reviewing the usefulness of the market and non-market sector data in Table 21 of the headline [Labour Force \(/statistics/labour/employment-and-unemployment/labour-force-australia/sep-2025\)](/statistics/labour/employment-and-unemployment/labour-force-australia/sep-2025) release.

[975.97 KB]

MRM2 - Modelled estimates of labour force status, by SA4 (ASGS), Age and Sex (Pivot Table)

↓ [Download XLSX](#)

[19.26 MB]

The ABS will cease publishing direct survey estimates tables for labour market regions (SA4) in the November release of Labour Force, Australia, Detailed on 18 December 2025. This includes tables 16, 16b, 16c, RM1, RM3, RQ1 and RQ2. This follows the release of new age and sex breakdowns for the modelled regional labour force estimates in the June 2025 issue of Labour Force, Australia, Detailed.

The ABS recommends using the modelled estimates in MRM1 and MRM2 whenever possible in reporting on data at the SA4 level, and recommends using the direct survey estimates when reporting on state/territory level data. For data items without modelled estimates available in MRM1 and MRM2 (i.e. tables 16c, RM3, RQ1, RQ2), direct survey estimates will continue to be available in the [LFS TableBuilder \(/statistics/microdata-tablebuilder/available-microdata-tablebuilder/labour-force-survey\)](#) product.
